Tip of the Month

As we move through calving and into the **breeding season**, ensuring that your cattle have access to the right minerals is part of a successful feeding program. Make certain that cattle consume minerals on a regular basis by confirming proper placement of the mineral in accordance with feeding/grazing areas and water sources. You also want to make sure that all animals have access to the mineral. This can be accomplished by providing one mineral tub source per twenty to thirty cows.

SweetPro's BreedMate contains 1,100 units of Vitamin E in combination with selenium (8 ppm) helps support the body's defenses to protect against infectious agents for better calving, clean-up and rebreeding.

MAY SPECIAL

- ◆ \$175.00/tub
- ◆ Regular \$182.00/tub

SALE!

- ➔ Heavy Duty Bale Spear with 2 tines skidsteer **\$869.63**
